

Find Your Heart

With many different education helpers for all topics related to the anatomy and pathology of the heart, follow these simple steps to find the model that is right for you.

ARE YOU:

If you're learning on a budget but still want an anatomically correct model of the human heart, opt in for the famous G08 2-part heart model. Comes with a free anatomy app!

A STUDENT

If you're looking for a heart model that can be used in classroom, you probably want to use a model that represents the anatomy correctly but larger than life-size. Have a look at the G12 heart model that can be taken apart in 4 pieces and is 2 times life-size.

A TEACHER

Depending on your patient education needs, you will want to have a model ready at hand that clearly shows different pathologies like LVH or even a bypass. Think about which medical topics you need to explain most often and then decide on a model that helps you visualize what you are explaining.

Bright Idea™ is the web-based special management system state and districts rely on by to support

exceptional child data, workflow reporting, from birth to adulthood, and administrators to dedicate student performance and ensuring receive the support needed to meet their educational goals.

Bright Idea™

is distinctive from other as it uniquely manages student with Part B and Part C requirements on Act of 2004. Its simple user complex processes, customizable ready update forms as local and the perfect solution to meet the

- Director of Special Education
- Special Education Department Chairs
- Special Education Service Providers
- Special Education Teachers
- District Data Stewards
- District Compliance Directors
- District Compliance Specialists

Simplicity

Today's special education administrators are required to be increasingly accountable for the support provided to children with special needs. Yet time spent preparing lengthy reports and training to use complicated systems could instead be spent managing the effectiveness of the support received. The Bright Idea™ intuitive user interface was specifically designed to decrease the time required to update student information, generate reports, and manage data, while increasing overall productivity, and can easily support data management and federal compliance reporting requirements with minimal training or lengthy start up periods for the average user.

Powerful

Special education providers must be able to satisfy the complex task of meeting the individual needs of each student, beginning with the initial screening process, to the delivery of services. The challenge for today's administrators is that each student's needs are different at any given time they're managing numerous students in various stages of receiving support. The key to sustaining productivity in this type of environment is to ensure the right data is incorporated into the support system in a way that facilitates the management of large groups of students with individual needs. Powerful features of Bright Idea™, such as its graphical process-flow displays, data generation and validation, centralized data collection, Medicaid billing capabilities, and customizable alerts help keep educators and administrators informed at all times.
